

Vendor Intelligence

AI-Driven Due Diligence: Capturing the \$25B Vendor Risk Market

90 days → 30 minutes

Seed Round | 2026

Vendor Due Diligence: A Broken System

The Math is Broken

- Enterprises manage 200+ vendors; 60% oversee 1,000+ third parties.
- Each deep assessment costs \$15K–\$20K and takes 90+ days.
- 48% of firms still rely on spreadsheets; only 5% leverage AI.

The Risks Are Exploding

- **61%** of organizations were breached via a vendor last year—**3x higher than 2021**.
- **35%** of **all** 2024 breaches originated from third parties.
- Average third-party breach cost: **\$4.91M**.

"You can't do 90-day assessments in a 30-day procurement cycle."

Why Now: The Perfect Storm

Three massive market forces are colliding to create a window of opportunity that demands immediate action.

Regulatory Tsunami

German LkSG: **Fines up to 2% global turnover** (Live 2024). EU CSRD: **50,000+ companies** reporting supply chain ESG. UFLPA: **\$1.34B merchandise detained**, 4,000+ seizures

Breach Crisis

61% breached via vendors in 2024. **98% connected** to a breached third party. **\$5.4B Fortune 500 losses** (CrowdStrike data)

AI Readiness

Multi-agent architectures can finally reason across thousands of sources with 95%+ accuracy, while compute costs drop 70% annually.

The window is NOW: Regulations are live, breaches are surging, and AI is finally ready to solve the scale problem.

The Solution: Autonomous Vendor Intelligence

We built the first fully autonomous due diligence platform. Everyone else gives you ingredients. We give you the meal—cooked, plated, and ready to serve.

The 5 Pillars of Intelligence

We assess all five dimensions procurement teams require. Every report covers every pillar in under 30 minutes.

Financial Health

Cash flow analysis, Altman Z-scores, bankruptcy prediction, and liquidity ratios.

Cybersecurity

Security posture assessment, breach history, and SOC2/ISO27001 certification verification.

ESG & Sustainability

Environmental compliance, CSRD readiness, and supply chain sustainability tracking.

Human Rights

Modern slavery screening, labor practices, and ethical sourcing transparency.

Anti-Bribery

OFAC/UN/EU sanctions screening, FCPA compliance, and corruption risk indicators.

How It Works: Multi-Agent Architecture

This isn't generic ChatGPT. Our platform deploys specialized AI agents working in concert, domain-trained on 10,000+ analyst reports.

Hunter Agents

Crawl SEC filings, court records, and news across 50+ countries. They monitor sanctions lists in real-time and track regulatory actions.

95%+ Accuracy: Validated against human analyst benchmarks with zero tolerance for missed high-severity risks.

Analyst Agents

Calculate financial health metrics, map ownership structures, and detect anomalies. They cross-verify findings to eliminate false positives.

Continuous Monitoring: Not static snapshots. Living intelligence that updates as the data changes.

Synthesis Agents

Generate decision-ready reports, produce contractual mitigation recommendations, and deliver negotiation leverage analysis.

Continuous Monitoring: Not static snapshots. Living intelligence that updates as the data changes.

Actionable Intelligence: Beyond the Score

Vendor Risk Report: Deep Insights

Supply Chain Ecosystem: Full Visibility

Viability Score: 82/100 (Approved – Low Risk)

- Detailed Financial Forensics with Peer Benchmarking
- Custom Contract Playbook with Clause Recommendations
- CAPA Recommendations for Identified Risks

- Acquisition History & JV Structures Mapped
- Tier 1/2/3 Supplier Visualization
- Geographic Concentration Analysis
- Single-Source Dependency Alerts

"We don't just hand you a score. We provide a **strategy**."

Market Opportunity: \$25B & Broken Incumbents

The incumbents provide raw data, not intelligence. We are the first fully autonomous solution delivering comprehensive analysis at speed.

TAM by 2030 (Vendor Risk Management)

CAGR Growth Rate

SAM (Enterprise Procurement Intelligence)

Legacy Data Providers

D&B, Experian: Provide credit scores only, lacking deep analysis.

Workflow Tools

SAP Ariba, Coupa: Process tools that lack risk intelligence.

Manual Services

Interos, Exiger: Still require expensive human analysts.

Team
